

Barna : – mentorship packs for  
clinical competencies in post anaesthetic care

UK National Core Competencies for Post Anaesthetic Care will be made available from 2013.

This competency framework has been developed by the Association of Anaesthetists of Great Britain and Ireland, supported by College of Operating Department Practitioners and BARNA.

BARNA is developing teaching material to underpin these competencies. This material will be available online to members only in closed section of the BARNA website.

Here we demonstrate a sample of material about airway management.

Our aim at BARNA is to provide material that is easily accessible to busy mentors and novices learning how to recover patients safely. Ideally each PACU department should share a culture of learning and sharing information. These packs should contribute to make this ideal a reality.
